

SYSTEM & DATABASE ADMINISTRATOR

Engineering industry

WHAT'S THIS ABOUT?

Our client develops, services and maintains research technology worldwide. As their Laval-based team grows, they are looking to add a System & Database Administrator to their team.

This newly-created role will help build and develop custom analytics to help improve the business across the board. The ideal candidate needs to be comfortable bringing analysis and discussion to top-level conversations to inform data-driven decision-making.

In terms of hard skills, you must be a SQL superstar. We need someone who can create database management procedures and evaluate data analysis models and procedures. You can add, remove or update user information and manage the configuration of operating systems. Is this you? Let's talk!

ABOUT YOU

- 4 years experience in the field of IT; at least 3 years working with SQL databases
- Proficient in writing SQL queries
- Can generate and present reports to assess business operations
- Strong interpersonal skills to address software concerns of internal employees
- Proactive problem solver who is alert, agile and focused on
- Well versed with Office 365 suite
- Expert command of English, spoken and written; French an asset

ABOUT US

- Competitive salary
- Full benefits package
- Pension contributions
- 3 weeks paid vacation to start
- Respectful and innovation-driven work environment
